

THE SKILLS BLIND SPOT

HR Managers cannot see what skills their employees actually have today.

They rely on outdated resumes and job titles instead of real, validated skill data — creating a blind spot that impacts every upskilling and reskilling decision.

Skills Evolve Fast

New skills appear daily while others become obsolete. Teams can't keep up manually.

Skills Are Invisible

Unless explicitly assessed or updated, skills stay hidden in old resumes and spreadsheets.

Hard to Validate

Self-reported skills and LinkedIn profiles rarely reflect current, accurate proficiency levels.

Design Assumptions

- HR Manager manages 50–200 employees and uses iMocha daily
- Skills data is collected via iMocha assessments + self-reporting
- Platform is desktop-first web application

USER PERSONA

Sneha Sharma

L&D Manager · 34 years old · Company size: 500 employees

Tools: Excel · LinkedIn · SAP SuccessFactors · Email Surveys

Goals

- Identify skill gaps across teams
- Plan training budgets effectively
- Track employee growth over time

Frustrations

- Relies on outdated resumes & spreadsheets
- No real-time skill visibility across teams
- Manual tracking is slow and error-prone

How She Works

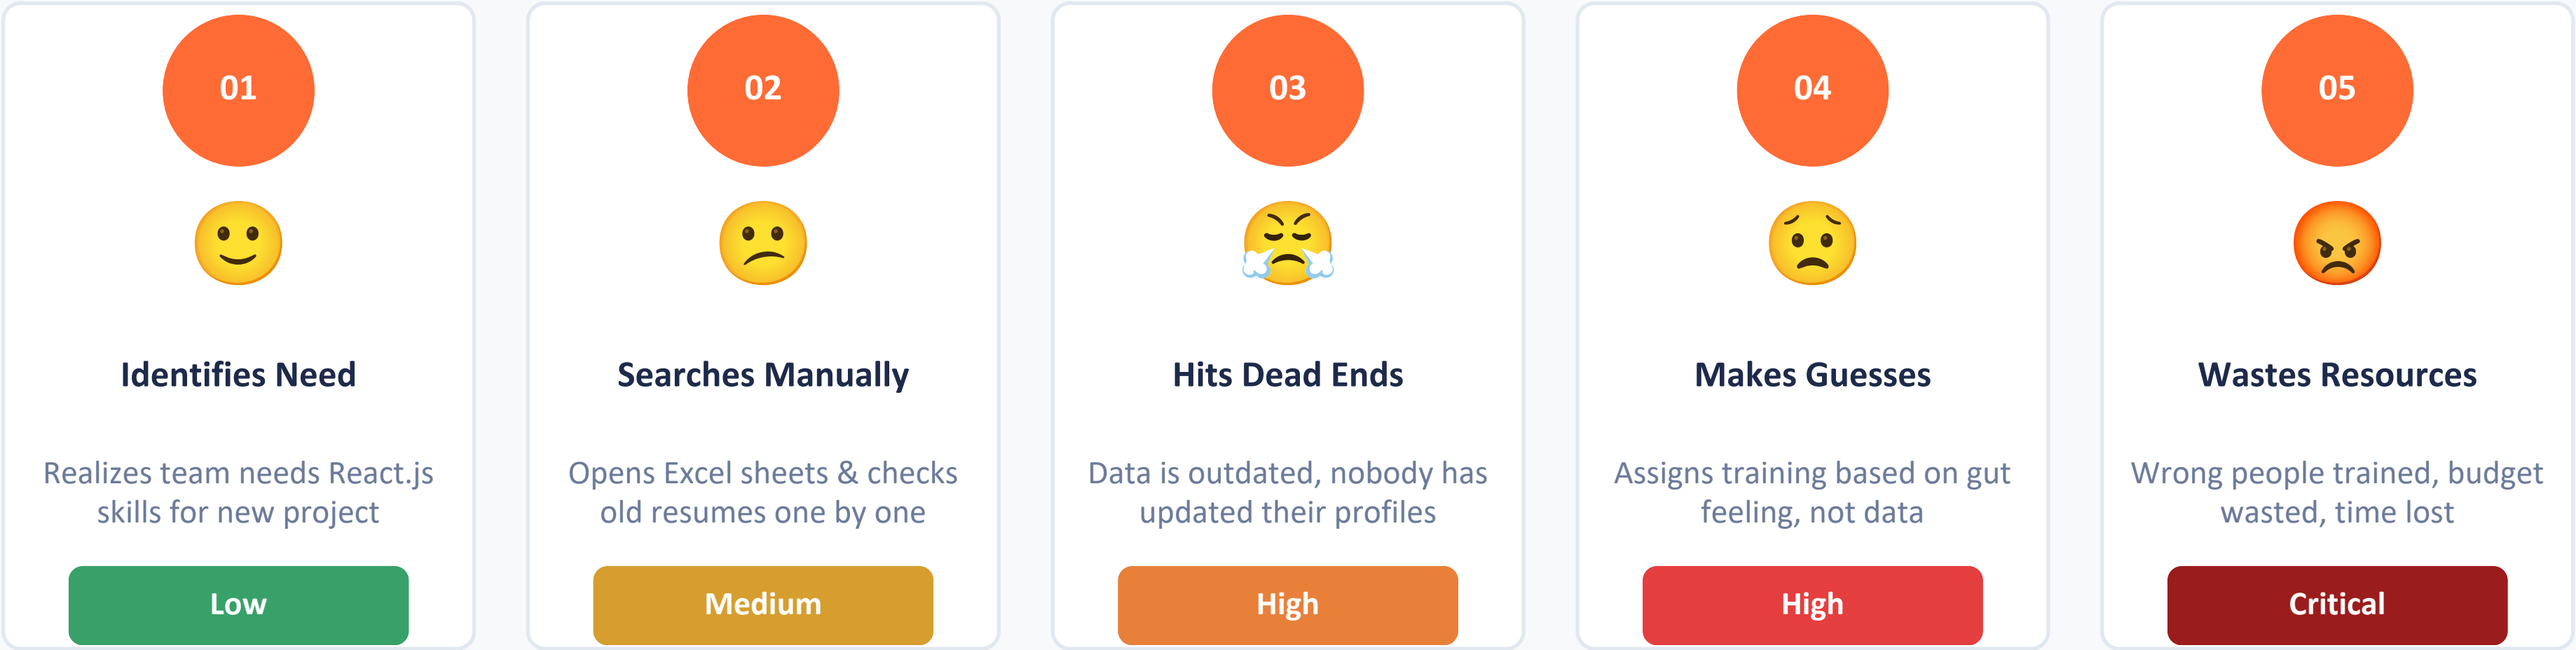

- Weekly reviews in Excel & SAP
- Quarterly skills surveys via email
- Ad-hoc manager feedback sessions

Key Insight

"I spend more time finding who knows what than actually planning the training."
— Sneha, L&D Manager

USER JOURNEY MAP

Sneha's Current Painful Journey — Without Skills Intelligence Hub

This journey inspired my solution — eliminate steps 2, 3 & 4 completely by giving Sneha instant, validated, real-time skills visibility.

OUR SOLUTION

Skills Intelligence Hub

One place for HR teams to SEE, UNDERSTAND, and ACT on skills data

Real-time Skills Heatmap

Instant visual overview of team skill strengths and critical gaps by department

Employee Skill Profiles

Individual validated skill cards with proficiency levels and last assessed date

Gap Alerts

Automated alerts for critical skill gaps that need immediate L&D attention

Validated Skill Badges

Clearly differentiates iMocha-assessed skills from self-reported ones

DESIGN DECISIONS

Why I Designed It This Way — Key decisions and reasoning behind every choice

01

Heatmap for Skills Overview

Color draws attention 5x faster than text. Red zones are immediately visible — no need to read rows of data to spot critical gaps.

02

Last Validated Date on Every Skill

Solves the core trust problem. Stale data is clearly marked, so managers know exactly how reliable each skill entry is.

03

Assessed vs Self-Reported Badge

Not all skills are equal. Showing how a skill was validated helps managers make better, more confident upskilling decisions.

04

Inline Training Recommendations

Managers can assign training directly from the gap — no tool switching, no friction. From insight to action in one click.

05

Simple Filters over Complex Search

HRBPs are not data analysts. Dropdown filters reduce cognitive load and speed up decision making significantly.

"Every design decision was made to reduce friction and increase trust in skills data." — Uday Dolas · B.Tech CT · RTMSSU Pune
